<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 22473
<b>Description</b>  I try to make join attribute by location of two polygon layers. I want to ad maximum of attribute index to target layer. When I define "take summary of intersecting features" and choose MAX, then i tried both of output table settings, but the output shapefile has only attribute COUNT. I try to set also another statistics (MEAN, MIN,...) but still only COUNT was in output shapefile. I did the same month ago on 2.8.1 and everything was ok, today I try to do the same, but there is this problem
