

## QGIS Application - Bug report #14499

### GRASS GIS 7 CRS issue

2016-03-15 01:10 PM - R. R.

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Processing/GRASS	
<b>Affected QGIS version:</b>	2.14.0	<b>Regression?:</b> No
<b>Operating System:</b>	Windows	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> duplicate
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 22474
<b>Description</b>		
<p>In my case the output layer of a GRASS GIS 7 command always has a generated CRS:</p> <pre>+proj=tmerc +lat_0=0 +lon_0=16.333333333333333 +k=1 +x_0=0 +y_0=-5000000 +ellps=bessel +units=m +no_defs</pre> <p>The CRS of the project and the input layers is MGI / Austria GK East (+proj=tmerc +lat_0=0 +lon_0=16.333333333333333 +k=1 +x_0=0 +y_0=-5000000 +ellps=bessel +towgs84=577.326,90.129,463.919,5.137,1.474,5.297,2.4232 +units=m +no_defs).</p> <p>WGS 84 (4326) input layers seem to work properly. I haven't tested other CRS so far.</p>

#### History

##### #1 - 2016-03-15 01:11 PM - R. R.

- Assignee deleted (Victor Olaya)

##### #2 - 2016-03-18 12:51 PM - Maximilian Krumbach

From the prj files of the shapes:

Created in QGIS:

```
PROJCS["MGI_Austria_GK_East",GEOGCS["GCS_MGI",DATUM["D_MGI",SPHEROID["Bessel_1841",6377397.155,299.1528128]],PRIMEM["Greenwich",0],UNIT["Degree",...
```

Output of v.clean via QGIS-toolbox

```
PROJCS["Transverse_Mercator",GEOGCS["GCS_bessel",DATUM["D_unknown",SPHEROID["Bessel_1841",6377397.155,299.1528128]],PRIMEM["Greenwich",0],UNIT["Degree",...
```

Imported into a new grass project; exported again

```
PROJCS["Transverse_Mercator",GEOGCS["GCS_bessel",DATUM["D_Militar_Geographische_Institut",SPHEROID["Bessel_1841",6377397.155,299.1528128]],PRIMEM["Greenwich",0],UNIT["Degree"...
```

(... is identical)

So the names of the CRS and the Datum differ, but the rest seems okay.

##### #3 - 2016-04-09 01:32 AM - Paolo Cavallini

- OS version set to 10

- Operating System set to Windows

So apparently +towgs params are stripped. I confirm this for Windows, whereas on Debian it works fine (EPSG:3003 in input results in 3003 in output).

#4 - 2016-04-09 02:19 AM - Giovanni Manghi

- Resolution set to duplicate
- Status changed from Open to Closed

duplicate of #11884

#5 - 2016-09-29 12:22 AM - Stefan Blumentrath

My guess is that the issue is related to this one:  
<https://trac.osgeo.org/grass/ticket/3048>  
(GRASS does not write AUTHORITY parameter (the EPSG code) to GeoTIFFs, thus QGIS makes a guess where it takes the first matching CRS (the ID number of the assigned EPSG code is lower than the original), I presume...).
