Pull Request or Patch supplied:	No		**Resolution:**	worksforme
Easy fix?:	No		**Copied to github as #:**	22510

Description

There should be a function in the Field Calculator that can code a string field into a integer field to assist in rasterizing a vector layer.

The functionality can be done with pyQGIS scripting, but I think it should be core functionality.

Here is an example of the script required to do this:

http://gis.stackexchange.com/questions/152458/create-id-for-each-string-attribute-in-qgis

History

#1 - 2016-03-22 03:52 AM - Matthias Kuhn

- Resolution set to worksforme

- Status changed from Open to Closed

This should be possible with an expression already:

http://gis.stackexchange.com/questions/39168/elseif-conditional-statement-in-qgis-field-calculator

Please reopen if this does not fulfill your requirements.
