

QGIS Application - Feature request #14566

change orientation of pages in composer when there's more than one

2016-03-24 09:27 AM - Donovan Cameron

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Pull Request or Patch supplied:		Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 22539
Description		
<p>I like being able to add a few pages to a composer when I have a small mapping project or one that the atlas features don't work well with. It's also makes it easier to have dynamic overviews on a key/reference map.</p> <p>But it's not currently possible to change the orientation of a specific page to portrait or landscape based on a data defined override (expression) or a checklist (gui).</p> <p>There's a variable for "layout_page" with a specific page number, but that's only available to map elements/items on that page.</p> <p>I can't use it in the "Composition" tab to override the orientation with an expression like:</p> <pre>CASE WHEN @layout_page IN (2,4) THEN 'landscape' ELSE 'portrait' END</pre> <p>I asked a question on GIS.se and the answers provide some workarounds. http://gis.stackexchange.com/q/186417/1297</p> <p>Maybe an option to change orientation for specific pages (like a checklist), in the orientation section, or the "page" part where a user can enter multiple pages would be nice too.</p>
