QGIS Application - Bug report #14584
Default style can not be copied to another computer

2016-03-29 07:54 AM - Andre Jesus

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Symbology			
Affected QGIS version:	2.14.0	**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	invalid	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	22555	

Description

I have 10 machines with QGIS. Since v2.8 I set de default style to all my features and copy the qgis.qmldb file to the other computers.
I updated to 2.14.1 and copied the qgis.qmldb file but It doesn't apply the styles.

Copying 2.8.6 qgis.qmldb to 2.14.1 didn't work, so I manually set all styles, layer by layer.

What I tried so far:

1. Copy the qgis.qmldb file from PC-a to PC-b

2. Set the default style to a single layer (to create the qgis.qmldb file) in PC-b, close QGIS, copy from PC-a to PC-b

3. Full replacement of PC-b's .qgis2 folder for PC-a's

Nothing seems to work. Is it a bug or the qgis.qmldb is useless now?

History

I found out the connection name was the problem. They must have the same name otherwise It won't work.

extra info:

Windows 7 x64

QGIS 2.14.1 x64 connecting to MSSQL Server database
