

QGIS Application - Feature request #14624

Field Calculator: warn users when new field is not large enough to fit computed values

2016-04-07 12:19 AM - Muhammad Ahmad

Status:	Open	Resolution: Copied to github as #: 22589
Priority:	Normal	
Assignee:		
Category:	Field calculator	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>I am using QGIS 2.8.2 on Ubuntu 12.</p> <p>When I calculate area of a polygon, Field calculator provides option of creating new field. If I do not provide appropriate (large enough) output field width, field calculator trims the area values.</p> <p>Example: If I set output field width =3 and precision=2 and perform area calculation, any area bigger than 999.99 will be converted, thus, 1200.20 will be converted to 120.20.</p> <p>When I use the option Vector - Geometry Tools – Export/Add geometry columns, the area calculations are correct.</p>
