

QGIS Application - Bug report #14703

Identify Results -> Save Link Fails

2016-04-19 06:58 AM - Frank MR

Status: Closed	
Priority: Normal	
Assignee: Alessandro Pasotti	
Category: Map Tools	
Affected QGIS version: master_2	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: No	Copied to github as #: 22664
Description	
<p>When using a OGC:WMS and selecting the (I) button, the WMS provider provides an HTML document with content that can be downloaded. When I click the "Save Link" to download content via <code><a href>...</code> links displayed in this page I get network timeout errors reported in QGIS. It does not pop-up a file save dialog to save content.</p> <p>I've tried the links provided using Copy Link, and pasting it into a web browser and it works fine. Also, I tried this in other GIS tools and it works fine. So I believe this to be a bug that the "Save Link" function does not work in the "Identify Results" page.</p>

Hi,

a few questions:

is the "(I) button" the identify tool?

what is the wms server, geoserver?

what is the platform where you use QGIS?

thanks!

#3 - 2016-10-26 04:15 PM - Giovanni Manghi

- *File qgis_issue_14703.qgs added*

- *Status changed from Feedback to Open*

- *Affected QGIS version changed from 2.14.1 to master_2*

Attached a project with a layer that allows to replicate the issue.

Clicking on links in the identify window causes a Timeout Network error in QGIS. Right click on links, click "copy link" and pasting into a browser works as expected.

Other GIS packages are working as expected.

It also true that there are other WMS services with a html getfeatureinfo were the links work as expected in QGIS identify window.

The problem here is that QGIS use QWebView to show content in the identify dialog. QWebView is not a full-featured web browser and it does not implement the download of content.

To fix this issue a system must be developed to download the files and choose the location where the downloads should be stored on the client machine.
