

QGIS Application - Bug report #14732

@user_full_name and @user_account_name causes Crashes

2016-04-26 12:26 AM - Ayodele Adeyemo

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Andreas Neumann	
Category:	PyQGIS Console	
Affected QGIS version:	2.14.1	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 22690
Description		
<p>I am currently working on a QGIS 2.14 and i am trying to use the built in variables to populate the user field with the system name of the user logging making the edit on the feature attribute. I have used the UUID generator and it has proved helpful but at every time I try to use either of @user_full_name or @user_account_name I get a crash dump.</p> <p>We are currently working on an open source migration meaning that we are moving our products from proprietary to open source and this functionality is a very important one for us because we work as a team and we need to track who is making changes to our data within the organization.</p> <p>Thanks ahead, Ayodele Adeyemo</p>

Fixed in changeset commit:"eed4ee6411ef3adda8d6c83b32172c0ef9a9c866".

#2 - 2016-04-26 02:36 AM - Nyall Dawson

I've fixed the crash, but please note that this WILL NOT do what you are trying to do. The relation reference widget expression is just a formatting change, it will NOT save these values to the database. In addition it will always show the current user for ALL features.

What you are looking for is #12492 - but that's not implemented yet.

#3 - 2016-04-26 03:46 AM - Ayodele Adeyemo

- % Done changed from 0 to 10

Please i dont understand what you are saying about it not saving into the the database(Do you mean the table?). Basically what I am trying to do is to do something like what the UUID generator does for its assigned field with the @user_full_name. Not necessarily through the relation reference widget expression. I will appreciate any help on this please.

Thanks for the support.
