Description

The **Outline: Simple line** symbol layer type has an option to "draw line only inside polygon". Could be handy to also have an option to "draw line only outside polygon". Would be a kind of drawing polygon contour on, inside and outside the feature. Use case: two layers that have same border.
Currently, you need to mix inverted polygon and "draw line only inside polygon" option to have a result, with the contraint in my case that i can't show the feature in the legend (see #14761)
