QGIS Application - Bug report #148
Legend groups capture legend items

2006-06-18 12:27 AM - Gavin Macaulay -

Status:	Closed			
Priority:	Low			
Assignee:	Marco Hugentobler			
Category:	Map Legend			
Affected QGIS version:		**Regression?:**	No	
Operating System:	All	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed	
Crashes QGIS or corrupts data:		**Copied to github as #:**	10207	

Description

1. Add a couple of layers to qgis

2. Create a legend group

3. Drag and drop a layer into the legend group

4. It is impossible to drag the layer back out of the legend group

Even if one drags a layer into the group, but doesn't drop the layer, it is still impossible to put the layer back outside of the group.

In summary - the legend group is greedy:)

History

#1 - 2006-06-26 10:34 AM - Marco Hugentobler

If a legend layer is inside a legend group, an item called 'make to toplevel item' appears in the right click menu. Clicking on this takes a legend layer out of a group.
Probably it would be more usuable to drag a layer out of a group, but it's a bit hard to define what that means. One possibility would be to take a legend layer out of a group if it is dragged to the group in which it is contained. Maybe there are other possibilities?

- Resolution set to fixed

- Status changed from Open to Closed

With commit:863c74a3 (SVN r5587), it is now possible to swap layers in a group with toplevel layers (or to drag layers in a group directly into other groups). I hope that this, together with the right click menu entry 'make to toplevel item', is sufficient.
