

QGIS Application - Bug report #14800

Problem rendering joined field from csv

2016-05-10 02:26 AM - Willy Bueno

Status: Closed	
Priority: Normal	
Assignee: Matthias Kuhn	
Category: Unknown	
Affected QGIS version: 2.14.2	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 22757
Description	
QGIS 2.14 hangs when applying gradient symbology on a joined field. Doing the same symbology on an attribute field has no problem. This problem does not exist in 2.12. Please find attached sample project.

Revision 22acf3b1 - 2016-05-11 01:34 AM - Nyal Dawson

Avoid refreshing canvas for every joined feature

Instead of setting the provider's subsetString to fetch joined features, use a feature request with FilterExpression instead. (Setting the subsetString results in a canvas refresh.)

Performance should be similar (if expression compilation is enabled) and this also has the advantage of avoiding provider-specific behaviour (eg case insensitive matching).

Matthias - (assigning you just to draw your attention to this). I've tracked it down and it looks like it was caused by 0f2dfdb19bd1ace179a6b19cc1dbc4e4918d3f10 - "Reload data when subsetString changes.". The issue is that QgsVectorLayerFeatureIterator::FetchJoinInfo::addJoinedAttributesDirect repeatedly calls setSubsetString, and for every feature this results in the dataChanged() signal being emitted. This signal gets caught by map canvas and forces a redraw. So for every feature a redraw is occurring... ouch! Any ideas on a fix for this?

#2 - 2016-05-10 04:35 PM - Nyal Dawson

- Status changed from Open to Closed

Fixed in changeset commit:"22acf3b1a3e7a6afe094ec6dec83776256d2655a".
