

QGIS Application - Bug report #14811

Loading QLR file locks parent directory forever in Windows

2016-05-13 03:23 AM - asgerpetersen -

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	2.14.2	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 22767
Description		
<p>When loading a QLR file QGIS locks the parent directory. This lock is not released before QGIS is closed.</p> <p>Imagine a qlr at the path</p> <p>c:\\test\\file.qlr</p> <p>When this file is loaded you cannot move or rename c:\\test before QGIS has been closed.</p> <p>This happens both when the QLR is loaded through the menu item "Layer -> Add from layer definition file..." and when the python binding "QgsLayerDefinition.loadLayerDefinition(path, group)" is used.</p> <p>Affected versions are 2.14, 2.12 and possibly earlier also.</p>

- Description updated

This should be fixed with 2.18 - can you confirm?

Hurray, I have tested with QGIS 2.18.13 and it has been fixed :)

Now, I can add a qlr-file to QGIS and afterwards I'm allowed to change to foldername where the qlr-file is located.

Thanks a lot for the fix.
