

QGIS Application - Bug report #1484

qgis crashes while editing a layer in a project with missing layers

2009-01-13 03:14 AM - cmoe -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Digitising	
Affected QGIS version:		Regression?: No
Operating System:	RedHat	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11544
Description 1. open a new project 2. load a vector layer (shape file) 3. save the project 4. move the shape file to an other location/path 5. reopen the project 6. the "project read error" dialog appears followed by the "where is...?" dialog 7. cancel the dialog 8. load a different vector layer in the project 9. make it editable and start editing 10. QGIS crashes.... It looks like, if the "where is"-dialog is canceled, the <Digitizing>-Section in the .qgs-file is not updated correctly until a change is made in the snapping options and a new save of the project.

Is this ticket still valid?

I could not reproduce it with trunk and with 1.0 branch

Marco

#2 - 2009-02-27 06:12 AM - cmoe -

- Resolution set to fixed

- Status changed from Open to Closed

Hi Marco

I can not reproduce the error with commit:bc0826af (SVN r10244) as well. I close the ticket.

regards

Cédric
