

QGIS Application - Bug report #14842
cannot save .nc file to Geotiff

2016-05-19 08:51 AM - Corinna Ravilious

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Rasters	
Affected QGIS version:	2.14.2	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 22796
Description		
<p>I use the following instructions to conver from a .nc file to a georeferenced geotiff. This worked in 2.12.2 but no longer seems to work in 2.14.2.</p> <p>I set a corrupt geotif at a result of step 2 in the instructions below.</p> <p>1. Add the .nc file to QGIS</p> <p>2. rightclick on the layer and save as but do not add the file to QGIS.</p> <p>3. create a.wld file with the same name as the geotiff.</p> <p>the .wld file is just a text file containing the following information:</p> <p>0.0083333 0.00000000 0.00000000 -0.0083333 -180.00000 90</p> <p>4. Now you can add the geotif to QGIS and the data will appear in the right place.</p>

Hi Corinna,

Do you have some sample data?

As a work-around you can try Crayfish plugin. You can then right click on your layer and export it as a geo-tif.
