

QGIS Application - Bug report #14880

Labeling specific layer throws a coredump in windows but not in linux

2016-05-24 07:12 AM - Alexandre Neto

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Labelling	
Affected QGIS version:	2.14.3	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 22833
Description		
<p>I have created a project that was working well in Linux, but once I opened it in Windows it gives me a core dump.</p> <p>I found out that it was related to labeling a specific layer in EPSG:3035. So labeling the attached shapefile gives me a core dump in windows, but works well on Linux.</p> <p>It should at least give the same error in Linux :-P</p>		

History

Update:

It has something to do with labeling in that shapefile in that particular EPSG.
