

QGIS Application - Feature request #14901

Composer Map: add an option to "View layer (and style) combination in map canvas"

2016-05-26 08:01 AM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 22854
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Presets are a quick way to view combination of layers/styles in the map canvas (or composer map).</p> <p>What can be a big improvement would be a "View style combination in map canvas" button (like the "View extent in map canvas" one) to set visible in the map canvas the current (layer + style) combination from print composer map item (especially when a preset is not set, this can be a quick way to update composer map).</p>
