

QGIS Application - Feature request #14969

It would be useful if QGIS gave a warning that there are null or EMPTY geometries when importing data.

Easy fix?: No	Copied to github as #: 22918
Description	
Based on this question on GIS StackExchange. http://gis.stackexchange.com/q/197271/55203	
It looks as if some plugins assume that all features have geometries. Which is a reasonable assumption, but the error message could be confusing :)	
It would just need to be a warning / info; it shouldn't prevent the import from working. Maybe a QgsMessageBar warning on import? Maybe something like...	
"Some of the features do not have geometry. This might cause problems for some plugins"

- Resolution set to wontfix

- Status changed from Open to Closed

I disagree - null geometries are quite common in some fields, and the correct solution is for the plugin to be fixed to handle them.
