

QGIS Application - Bug report #14995

Missing texts in dxf export

2016-06-10 04:42 AM - Richard McDonnell

Status: Closed	
Priority: Normal	
Assignee: Jürgen Fischer	
Category: DXF export	
Affected QGIS version: 2.14.3	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: No	Copied to github as #: 22942
Description	
<p>I would firstly like to say that the DXF Export option is great, and is a great addition to QGIS. There is one problem though which you you may be able to help with.</p> <p>I have a PostGIS database LineStrings and Points (Text) The Linestrings come out perfect, the problem is the text. What I would like to do is have the text export also, all I get when I export the point file is....Points, no text. I would appreciate any help, I am trying to get a Map out at the moment and would have a preference to output it via QGIS.</p> <p>I have attached a zip file with two shapefiles, exported from the PostGIS database, I have had to restyle them, due to database column headers being longer than shapefiles. The included QGIS Project File contains everything styled as I would the PostGIS database.</p> <p>Regards,</p> <p>Richard.</p>

I can't reproduce this - works fine with AutoCAD for me. But I found a problem using BricsCAD, which would reject the filled circles as invalid, because of 3D coordinates. Perhaps that also caused problems with the software you use. I suppose you used a symbology scale within the visibility range of the point layer...
