Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>I would love to have option Add Preset... as part of preset selection in the composer map item properties. The same way as it is in the Layers docker.</p> <p>Why?</p> <p>In the last few years I created probably few thousands of projects in QGIS. Some percentage contains multiple composers and I did not use presets and tend to forget to use presets for multiple composer maps. I can't find a fast way to find out what layers were on when layers are locked for map item. It would make it really easy when I could add preset with layers active for that locked map item to easily activate that preset in Layers docker and see immediately what layers I used for that map item. Than kyou.</p>
