

QGIS Application - Bug report #15017

Trouble keeping layer effects when exporting layout

2016-06-12 11:11 PM - Magnus Nilsson

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	2.14.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 22964
Description		
<p>Not 100% sure if this is a bug, but I thought I should post it here just in case.</p> <p>I use layer effects (inner glow) for polygon borders and I export the layout to a jpg image. When I set the polygon border style to none, the exported image looks fine. However, when I select a border colour, such as white, the colour seems to override the layer effect and the layer effect is lost where polygons meet. It is not lost on polygons that do not share borders with other polygons. This issue is only related to the exported image, all looks fine in the layout in QGIS.</p> <p>Windows 7 64 bit</p>

- Status changed from Open to Feedback

Can you post some screenshots or a sample project? The description alone isn't easy to understand.
