| Crashes QGIS or corrupts data: | Copied to github as #: 22985 |

Description

Layer properties > Displacement point rendering

Renderer settings > for the rotation of the symbol, apply a data defined expression using one of the layer's fields

Apply

symbols are rotated but they all follow one direction within a group (seems to be the value of the first point fetched in the group) instead of each symbol following its own value.

Trying an expression like `rand (1, 360)`, each symbol was oriented differently.
