

QGIS Application - Bug report #15077

Disable "Add circular string..." tools for temporary layer

2016-06-19 06:21 AM - Harrissou Santanna

Status: Closed	
Priority: Normal	
Assignee:	
Category: Digitising	
Affected QGIS version: 2.14.3	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: No	Copied to github as #: 23020
Description	
<p>Toggle to edition a line or polygon temporary layer Try to add new feature using one of the "Add circular string..." tools. When validating your geometry, it's cleared. If you combined with the simple "add feature" tool when constructing the geometry, the curved part is modified to a straight line and sometimes QGIS may complain about a self-intersection (generated by its own modification)</p> <p>I think that, if it's normal that temporary layer doesn't allow supports curves then these circular tools should not be available. And more generally, if provider doesn't support curves, better disable the tools.</p>	

History

#1 - 2016-06-19 06:38 AM - Harrissou Santanna

I'm unable to reproduce it using another scratch layer. Can't figure out what was the problem with the previous one.
will give it a new try later.

#2 - 2016-06-20 08:15 AM - Even Rouault

Not completely sure this is related, but when trying to reproduce this issue, I found #15087 (now fixed)

#3 - 2017-05-01 01:05 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

#4 - 2018-02-27 07:21 PM - Harrissou Santanna

- Status changed from Open to Closed
- Description updated
- Resolution set to not reproducible

Works now (2.18 and later) so I set to not reproducible as I couldn't confirm in the past
