QGIS Application - Bug report #15085
The setting 'Use layer ids as name' does not work for WFS-call

Description

The setting 'Use layer ids as name' works for WMS-call but <u>does not</u> work for WFS-call. This makes it difficult programmatically to use a combination of WMS and WFS.

Case:
I have a qgis-project. The qgis-project is published as a WMS and WFS with QGIS Server (ubuntu). Since there is inconsistency in the naming of files with WMS and WFS if a layer contains a space (reported as bug), I want to use the setting 'Use layer ids as name' to be able to use a combination of WMS and WFS call to the same qgis-project. In Project Properties I specify that I want to use layer ids as names:
Use_layer_ids_as_names.png

The problem
When calling a WMS GetCapability-request to this Qgis-project layerids are used as names:
WMS_use_layernames_as_ids_001.png

However, when calling a WFS GetCapability-request to this Qgis-project, the layerids are NOT used as names (it is the layername instead):
WFS_use_layernames_as_ids_001.png
