QGIS Application - Bug report #15097
Issues when running "Import into PostGIS" in batch mode

2016-06-21 11:31 PM - Giovanni Manghi

Status:	Closed			
Priority:	Severe/Regression			
Assignee:	Victor Olaya			
Category:	Processing/QGIS			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	23039	

Description

  - when selecting layers from filesystem and the table name is left blank, to leave the tool use the input vector as name, then the absolute path of the input vector is used as table name
  - "table to import parameter" is filled with "none" when the tool is opened, and there is the suggestion to leave it blank to use the layer name. But then if the user leave "none" this word is used as table name.
  - "none" is used also as default for the "primary key field", if the user leave it then "none" is used as name for the PK column
  - compared to the tool in DB Manager it seems to miss the source/destination CRS parameters

[processing] fixes for 'import into PostGIS' alg

fixes #15097

History

#1 - 2016-06-22 03:05 AM - Giovanni Manghi

- Priority changed from Normal to Severe/Regression

- Target version changed from Future Release - High Priority to Version 2.16

the "none" issues are a regression since 2.8.*

#2 - 2016-08-23 11:10 AM - R. R.

- File 15097.mp4 added

To me, this is a really important issue. I've uploaded a screencast for documentation purposes.

#3 - 2016-10-14 01:47 AM - Victor Olaya

These should be fixed already.

The only thing not fixed is your last suggestion about the dest crs, since that is a feature request. Also it would change the syntax of the algorithm, so it cannot be added to this next release. We should wait until 3.0

#4 - 2016-10-15 01:58 PM - Giovanni Manghi

Hi Victor, thanks for the fixes. I see still two issues:

1) when the table name is left blank, once imported the table in Postgis has also the ".shp" in its name. I think is necessary to strip the extensions from inputs names.

2) if the field for primary key is left blank the tool gives an error

Error importing to PostGIS Creation of data source "public"."aaa" failed: ERROR: syntax error at or near "," LINE 1: CREATE TABLE "public"."aaa"(, PRIMARY KEY ()) ^

I would suggest to fill this field out of the box with a default like "gid" or just "id".

- Status changed from Open to Closed

Fixed in changeset commit:"e58177cf9e360021618d6029821cbc8416496cff".

#6 - 2016-10-17 08:41 AM - Giovanni Manghi
- Status changed from Closed to Reopened

the latest build of master on osgeo4w is 979d619 that does not contain the latest commits, among the others the latest patch for this ticket. So I applied the patch manually but at that point the tool returns "Error importing to PostGIS Creation of data source "schema_name"."" failed: ERROR: zero-length delimited identifier at or near """" LINE 1: CREATE TABLE "schema_name".""(gid serial, PRIMARY KEY (gid)) ^" but I soon realized that this error is also shown without the patch. At this point from "master_2" I downloaded the whole Processing folder and placed in plugins folder in .qgis2: no more error but also "missing parameter value: Table to import..." when leaving the table name blank. The "primary key field" seems fixed.

#7 - 2016-10-18 06:55 AM - Victor Olaya
- Status changed from Reopened to Closed

Fixed in changeset commit:"e55d1923fc08900864f7ef02866cca0a2e11cc15".

#8 - 2016-10-19 07:56 AM - Giovanni Manghi
- Status changed from Closed to Reopened
- Target version changed from Version 2.16 to Version 2.18

@volaya @alexbruy

tested the latest master_2

"missing parameter value: Table to import..."
when leaving the table name blank (both batch and normal use)

#9 - 2016-11-21 03:58 PM - Nyall Dawson

- Status changed from Reopened to Closed

Fixed in changeset commit:"271e67e37b781260d889778e97064efae72a0b15".
