QGIS Application - Bug report #1515
wms layer is added even if the the request fails

2009-01-26 11:52 AM - Giovanni Manghi

Status:	Closed			
Priority:	Low			
Assignee:	Marco Hugentobler			
Category:	Web Services clients/WMS			
Affected QGIS version:		**Regression?:**	No	
Operating System:	All	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	wontfix	
Crashes QGIS or corrupts data:		**Copied to github as #:**	11575	

Description

When a WMS layer is added and the requests fails, the layer is added anyway in the legend. The result is that if the layer is not removed by hand from the legend, any action (zoom, pan, add/remove other layers) will produce the error shown when the initial request failed.

If the wms layer cannot be retrieved it should not be added to the legend.

I noticed this behavior when I mistakenly used the wrong URL while adding a new wms server connection:

I used

http://mapas.igeo.pt/igp/Capabilities/wms_CRIF_GetCapabilities.xml

instead of

http://mapas.igeo.pt/wms/crif2008

The first URL gives a list of layers but a error is returned when you try to add them, still they are added to the legend.

History

- Resolution set to wontfix

- Status changed from Open to Closed

Well, the problem was then explained very bad. I will open a new ticket with a better description if and when I will encounter again the same problem.
