QGIS Application - Feature request #15166
Cannot reach top of tree in Layers Panel

2016-06-28 07:29 PM - Dan Jacobson

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	GUI		
Pull Request or Patch supplied:	No	**Resolution:**	wontfix
Easy fix?:	No	**Copied to github as #:**	23105

Description

In computer science, every tree has a root node.

Alas in Layers Panel it is cut off, we can't scroll up to see it and manipulate it.

Hi Dan,

Can you be more descriptive about what you would like to do with the root node? Provide some use cases?

And how should it look like in the UI?

Andreas

#2 - 2016-06-29 07:48 AM - Martin Dobias

- Resolution set to wontfix

- Status changed from Open to Closed

This is by design in the Qt model/view framework for the tree view and it is how all tree views in Qt work (in fact there is actually a root node that is always invisible).

If you need to have a top-level node in your project, I would suggest adding a top-level group and moving everything else into that group.
