

QGIS Application - Feature request #15170

Add "Undo" button to Layer Properties

2016-06-29 12:57 AM - Dan Jacobson

Status:	Open	Resolution: Copied to github as #: 23109
Priority:	Normal	
Assignee:		
Category:	GUI	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>On Layer Properties there are four buttons at the bottom:</p> <p>OK, Cancel, Apply, and Help (which does not show any help, by the way.)</p> <p>Well you forgot Undo.</p> <p>Without Undo, if there is any mishap, which is extremely likely, the user must quit without saving changes, and start qgis all over again.</p> <p>You might think that closing Layer Properties, and clicking Edit &gt; Undo would help. But I am sorry to inform you that that item is greyed out. Furthermore, CTRL+Z does nothing.</p>

You are right but note that QGIS 2.16 comes with a dock panel for layer properties (not all covered yet) and this panel has an Undo command. I think layer properties future is through this dock panel.

If I recall well there's a plugin that does it currently: UndoPropertiesChanges. You might give it a try meanwhile.
