

QGIS Application - Feature request #15220

Offset Curve: Use offset by distance or by percentage

2016-07-04 09:19 PM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 23157
Priority:	Normal	
Assignee:		
Category:	Digitising	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>The Offset Curve tool shows the "User Input Panel" in which one can indicate the distance of offset.</p> <p>Could be nice, in case of polygon feature, to be able to select if the value should be a distance (as for now) or a percentage of the current size (a kind of percentage buffering).</p> <p>I don't know how percentage can be evaluated for lines, yet. Any input is welcome.</p>

What would be the use case? Can you please explain?

It could help to resize/rescale features (maybe from a wrong georeferencing or using wrong units). So you know the ratio.

Actually the need comes from a french forum user looking for a tool available in ArcGIS (it might be this one [http://resources.arcgis.com/en/help/main/10.1/index.html#//01m8000000260000000](http://resources.arcgis.com/en/help/main/10.1/index.html#//01m800000026000000)), we cover distance but not ratio
