Crashes QGIS or corrupts data:	No	**Copied to github as #:**	23168	

Description

Test on different machines and with different QGIS versions it seems that the right click option in the Result Viewer has disappeared (e.g. for plot saving as image)

anyway, saving the image on disk from the main UI is possible and it works nicely

It was not a Processing functionality. Previously we used QtWebkit (read, web-browser) to show html stuff in Processing. Now, with QtWebkit removal from Qt and all major distros we switched to another, more simple widget, to keep Processing working.

You always can grab images from the folder where you saved results of the algorithms.
