**Description**

Hi,

I've had this problem for a while. Every time I try to install any instance of QGIS, I get errors (images attached). I had a version running properly at one point, but haven't had any success in about a year. I tried to submit a ticket about half a year ago but received very little help. I realize it may be a local issue, but would just like to know how to perform a clean install to avoid the errors and get it up and running. Any help you provide is greatly appreciated.

Thanks,
Cam
