QGIS Application - Bug report #1526
QgsVectorFileWriter() throws error by Postgres columns of type bigint

2009-02-03 06:36 AM - Horst Düster

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:	Build/Install			
Affected QGIS version:			**Regression?:**	No
Operating System:	Debian		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	11586

Description

The [[QgsVectorFileWriter]]()-Method throws an error when a [[PostGIS]]-Layer contains columns of type bigint. I know that not all vector file formats, especially DBF, do support this datatype. A feasible solution could be to cast this type to character strings.

Thank you very much for your lightspeedfix. Would you please commit the fix also to the Version_1_0 branch?

#3 - 2009-02-03 07:50 AM - Horst Düster

- Resolution deleted (fixed)

- Status changed from Closed to Feedback

mmmm....

The export of bigint columned layer works without error message. But unfortunately the saved shape file is empty. :-((

Other layers without bigint columns are saveable as shape files without any problems.

I reopen the ticket.

ouch, could have sworn that it worked when I tested it.   Better luck this time.
fixed in commit:792862ba (SVN r10102).
