

QGIS Application - Bug report #15269

SQLite: All attributes are displayed as NULL in attribute panel

2016-07-13 03:16 AM - Casper Børgesen

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	master	Regression?: No
Operating System:	windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 23205
Description		
<p>I have a case with a SQLite dataset containing two layers. A line layer and a polygon layer. Both layers have attributes with values. I have opened both layers in QGIS.</p> <ul style="list-style-type: none">- When performing a <i>identify features</i> on features in the two layers the result looks fine.- When opening the <i>Attribute Panel</i> on either of the layers all values are NULL. <p>I would expect the <i>Attribute Panel</i> to display the correct attribute values of all the features and not just a collection of NULL's.</p> <p>I produced this in MASTER (3d72837) using the attached SQLite test dataset. I have also reproduced this in 2.14.1.</p>
