

QGIS Application - Bug report #15328

segfault when opening projects

2016-07-22 02:16 AM - Gavin Fleming

Status: Closed	
Priority: Normal	
Assignee:	
Category: Unknown	
Affected QGIS version: 2.16.0	Regression?: No
Operating System: ubuntu	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: invalid
Crashes QGIS or corrupts data: Yes	Copied to github as #: 23260
Description	
<p>I tried to open various projects (containing various combinations of PostGIS, kml, openlayers, WMS and tiff layers) and 2.8.9, 2.14.4, 2.16 and master crash</p> <p>e.g. `1455 Segmentation fault (core dumped)`</p> <p>all versions built from source.</p> <p>Not sure how to get more information.</p>	

History

it's definitely WMS layers causing this.

#2 - 2016-07-23 01:55 PM - Nyal Dawson

- Resolution set to invalid

- Status changed from Open to Closed

This sounds very much like an issue in your build environment, not QGIS itself. I'd suggest asking on the dev list instead.
