

QGIS Application - Bug report #15365

ubuntu repository not available

2016-07-29 01:08 PM - Alejandro Rivero Borrell

Status: Closed	
Priority: Normal	
Assignee:	
Category: Unknown	
Affected QGIS version: 2.16.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 23296
Description	
For the debian/ubuntu repo the gpg send an error "no public key". Also apt-get does not work (repo unavailable). I think is the captcha used for security

are you sure you updated your keys yourself?

see <http://qgis.org/en/site/forusers/alldownloads.html#debian-ubuntu> below for instructions to retrieve the keys and put them in your key chain...

plz also be more specific what repo-url's you are using, so we can test more specific

#2 - 2016-09-23 12:16 PM - Alejandro Rivero Borrell

I could connect to the repo using deb <http://ubuntu.qgis.org/debian/trusty/main>.

It seems to jump the captcha request. This come from:

<http://qgis-developer.osgeo.narkive.com/MYBqCUx8/mirroring-ubuntugis-repo>

#3 - 2017-04-27 06:25 AM - Alexander Bruy

- Operating System deleted (Linux)
- Category deleted (Network)
- Status changed from Open to Closed
- OS version deleted (ubuntu 16.04)

Seems fixed now.

Also such questions better to ask in the mailing list and/or IRC/Gitter
