QGIS Application - Bug report #15437
Ctrl F should not be used to filter layer and its use can lead to real confusion

2016-08-14 09:41 PM - Harrissou Santanna

Status:	Open		
Priority:	Normal		
Assignee:			
Category:	Unknown		
Affected QGIS version:	3.0.0	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	23363

Description

In attribute table, Ctrl F opens a dialog to search features you'd like to select or filter in the layer.
Out of the attribute table, holding Ctrl F opens the Filter provider dialog of the current layer, whose effect is to "remove" from the provider some features.
In the first case, you are looking for features; in the other, you filter out from the project some features (I don't think it's a search - which is the common assumption of Ctrl F) and having same shortcut for those two functions (which dramatically do different things) sounds confusing.

History

#1 - 2017-05-01 01:03 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#2 - 2017-09-22 09:55 AM - Jürgen Fischer

- Category set to Unknown

#3 - 2018-02-27 06:09 PM - Harrissou Santanna

- Affected QGIS version changed from 2.16.1 to 3.0.0

- Description updated

Still true on 3.1 (and 2.18)
