<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>As used in an ArcGIS layout environment, the ability to distribute graphic elements would be useful in the QGIS composer. At present the align feature works well but could be supplemented by a distribute feature that allows the following functions:</p> <p>The graphics are distributed with equal spacing between the centroid of each graphic:</p> <p>Distribute Horizontally</p> <p>Distribute Vertically</p> <p>Make Same Size</p> <p>Make Same Width</p> <p>Make Same Height</p> <p>Fit to Margins</p> <p>Fit Width to Margins</p> <p>Fit Height to Margins</p> <p>Note this is a direct copy of the functions available in ArcGIS.</p>
