Crashes QGIS or corrupts data:			**Copied to github as #:**	11613

Description

I signal this as a bug, but it could be an annoyance for others.
When I select features with the box tool and then open the attribute table, if I select anything from the "selection" combobox (bottom right) the features get unselected. It means that I can't move, i.e., the selected features to the top of the table grid.

History

#1 - 2009-03-21 09:58 AM - cfarmer -

- Resolution set to fixed

- Status changed from Open to Closed

This is fixed (new implementation) in trunk (rev.10338)

This will not be backported due to significant changes to the user interface. Please wait for next release for updates to attribute table, and by proxy, this functionality.
