

QGIS Application - Bug report #15592

Adding WMS from Metasearch: GetCapabilities does not work

2016-09-21 12:11 AM - Paolo Cavallini

Status: Closed	
Priority: Normal	
Assignee: Tom Kralidis	
Category: MetaSearch Catalogue Client	
Affected QGIS version: 2.16.2	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 23516
Description	
When adding a newly discovered WMS/WMTS layer from Metasearch, the GetCapabilities takes a long time and fails. The sme entry, once added, works fine.	

History

#1 - 2016-09-27 03:57 AM - Tom Kralidis

Worksforme. Can you provide further details and use case so I can try to reproduce?

#2 - 2016-09-28 12:00 AM - Paolo Cavallini

Tested again on qgis 2.16.2: searched `land` from geopole, clicked on Add WMS/WMTS, the Add WMS dialog opens, then it waits until it gets `Impossibile scaricare le capabilities:Download di capabilities non riuscito: Operation canceled`. Clicking on Load afterwards works fine, immediately.

#3 - 2016-09-28 04:06 AM - Tom Kralidis

Still worksforme. Trying to reproduce, when searching for land I get 640 results. Clicking on the first result (Stadtstruktur 2001 (Umweltatlas)) worksforme. Is this the search result you are working against as well or something else?

#4 - 2016-12-28 08:06 AM - Giovanni Manghi

- Status changed from Open to Feedback

#5 - 2017-01-04 05:10 AM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Feedback to Closed

It seems to work in 2.18 now.

Thanks.
