<b>Crashes QGIS or corrupts data:</b> No	<b>Copied to github as #:</b> 23550

#### Description

The QGIS-Plugin-Manager seems to have a bug. After installing python plugins there is no icon available in the plugin description:

<https://i.stack.imgur.com/g9b7H.png>

Instead of the proper icon there is a placeholder displayed for each python plugin:

<https://i.stack.imgur.com/poWRF.png>

I copied the path to the image

<https://i.stack.imgur.com/czxSL.png>

--

wich is:

file://c:/Users/myusername/.qgis2/python/plugins/DigitizingTools/digitizingtools.png

It seems as if the path would only work for unix filesystems as there is no colon after the drive letter.

wrong path:

c:/Users/myusername/.qgis2/python/plugins/DigitizingTools/digitizingtools.png

correct path:

C:\\Users\\myusername\\.qgis2\\python\\plugins\\DigitizingTools\\digitizingtools.png

For C++-Plugins the icons are displayed:

<https://i.stack.imgur.com/fi5u6.png>

For the C++ plugins the resource path is used:

qrc:/heatmap/heatmap.png

Is this a known bug?
