Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Adding the ability to run custom python functions in the print-composer export process would allow for additional automation of workflow.</p> <p>For instance, I have a 200+ page atlas for print. When exporting I also need to update an online database and upload the exported PDF. I would love the ability to use a python script to grab the file that was just exported, upload it, and run some mySQL updates via python as well.</p> <p>So to summarize, I would like an option to run custom python before or after export.</p> <p>If running after, an api that provided access to the file that was just exported and the atlas feature data would be useful.</p>
