

QGIS Application - Bug report #15757

GDALTools: file extension not automatically added

2016-10-26 05:16 AM - Paolo Cavallini

Status: Closed	
Priority: Normal	
Assignee:	
Category: Processing/GDAL	
Affected QGIS version: 2.18.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 23679
Description	
This is quite cumbersome for users. If extensions are not added, errors result, like: ERROR 5: Pixel type must be Float32 ERROR 6: GDALDriver::Create() ... no create method implemented for this format.

History

#1 - 2017-01-02 05:55 AM - Giovanni Manghi

- Category changed from GDAL Tools to Processing/GDAL

#2 - 2017-02-14 04:44 AM - Giovanni Manghi

- Status changed from Open to Feedback

Just tested on 2.18.3 and it works as expected on both Linux (kde) and Windows.

#3 - 2017-02-15 06:18 AM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Feedback to Closed

Confirmed, now it works.

Thanks.
