

QGIS Application - Feature request #15758

change length+width of subticks on a scale bar and label them

2016-10-26 09:46 AM - Donovan Cameron

Status:	Open	Resolution: Copied to github as #: 23680
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>It'd be great to be able to do some more styling with scale bars, like changing the length and width of sub ticks on a scale bar and also have an option to label them, like being able to label only the middle tick (when there is an odd number of them).</p> <p>See attached pic for an example.</p>
