QGIS Browser is almost useless without this feature, at least for me, because whenever I map a WMS/PostGIS/etc I usually want to work on that layers too using QGIS Desktop, but I always need to organize data, rename and move stuff around, certifying myself I didn't forget any of the shapefile's files (shx, dbf, ...).

- Subject changed from QGIS browser to rename shapefiles in browser

#3 - 2017-05-01 12:46 AM - Giovanni Manghi

- Easy fix? set to No

#4 - 2017-09-22 09:55 AM - Jürgen Fischer

- Category set to Unknown

#5 - 2018-12-20 10:31 AM - Friede Goral

I agree, renaming and copying shapefiles in the QGIS browser (as in Esri ArcCatalog) would be a great improvement (over renaming all shapefile-files manually...).
