Crashes QGIS or corrupts data:	No	**Copied to github as #:**	23721

Description

A number of scripts rely on zero-width character(s) (Indic-based scripts, Arabic, etc.), which triggers a failure in the PAL curved placement code.

I've stumbled on this on qgis master (what will become 3.0), shocked I haven't spotted this before now.

PR coming in an instant.
