QGIS Application - Feature request #15817

No

Add an "offset" property to first level symbol (needed for the "Offset point symbols" tool)

Easy fix?: Description

To use the rotate point symbol, one can define a rotation field at the first level of symbol layers and have the tool usable.

To use the offset point symbol, there's no offset option at the first level, meaning that user needs to set the offset field for all symbol layers of the symbol if he wants the global symbol moved.

This is not a consistent behavior between these two tools, imho.
