

QGIS Application - Bug report #15861

Magnifier zoom factor incompatible with maximum zoom level

2016-11-19 07:10 AM - Nathan Perry

Status: Closed	
Priority: Normal	
Assignee:	
Category: Map Tools	
Affected QGIS version: 2.18.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 23779
Description	
<p>When using the Magnifier to zoom by using the +/- shortcuts or the mouse wheel/trackpad, the zoom level is incremented by a factor of 2x. However, the maximum zoom level is set at 1000%, which is not a factor of 2x. This means when zooming in, the levels are 100, 200, 400, 800, but then 1000 instead of 1600. Thus, when zooming out the levels are 1000, 500, 250, 125, 62... As a result, it's impossible to zoom out to 100% from the maximum of 1000% using the shortcuts or mouse wheel.</p>	

Associated revisions

Revision 6d0e8e62 - 2016-11-21 01:38 AM - Nyal Dawson

Make max canvas scale 1600% (fix #15861)

Max canvas scale should be a multiple of 2 so that zooming in to the max and then back out again results in 100% zoom option.

Additionally, make the min/max zoom level not come from QSettings as these aren't exposed anywhere

- *Status changed from Closed to Reopened*

Apologies for the duplicate (#15900). I did not see at first that this issue had successfully been posted and already closed.

Reopening because a similar issue exists with the minimum zoom factor. It should be 12% (0.125) or 6% (0.0625) to avoid the same problem.
