

QGIS Application - Feature request #15864

hide labels when using inverted polygon renderer

2016-11-19 04:58 PM - Donovan Cameron

Status:	Open	<b>Resolution:</b> <b>Copied to github as #:</b> 23782
Priority:	Normal	
Assignee:		
Category:	Labelling	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
<b>Description</b>		
<p>It would be a major enhancement to make labels hidden that are outside of the inverted polygon renderer.</p> <p>Like a fake clip/mask.</p> <p>Maybe an option is to let the labels have a z-index that's sensitive to inverted polygon renderings.</p> <p>Or when you apply an inverted polygon render, that there's an option to "hide/mask/render labels".</p>		

History

I found a current work around and that's to use the refFunctions plugins geomintersects() function as as part of a condition when using either rule based labeling or data defined.
