QGIS Application - Feature request #15864
hide labels when using inverted polygon renderer

2016-11-19 04:58 PM - Donovan Cameron

Description

It would be a major enhancement to make labels hidden that are outside of the inverted polygon renderer.

Like a fake clip/mask.

Maybe an option is to let the labels have a z-index that's sensitive to inverted polygon renderings.

Or when you apply an inverted polygon render, that there's an option to "hide/mask/render labels".

History

#1 - 2016-12-01 01:09 PM - Donovan Cameron

I found a current work around and that's to use the refFunctions plugins geomintersects() function as as part of a condition when using either rule based labeling or data defined.
