<b>Description</b>		
<p>Good afternoon,</p> <p>I would like to submit a couple of change requests for the developers consideration.</p> <p>1) Would it be possible to use a signed publisher for the QGis software? This is to make installing the software in environments such as ours (which has a lot of security software and vulnerability scanners running) a lot easier to manage.</p> <p>2) Would it be possible to limit the use of Batch files within the software? Again, this creates quite a large overhead for system administrators within organisations that have to authorise each batch file that enters the environment.</p> <p>Thanks for your consideration.</p> <p>Regards,</p> <p>Chris Dance</p>
