

QGIS Application - Feature request #15902

Layer Properties: Mix "No labels" and "Blocking" labels options into a single one

2016-11-27 03:29 PM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 23819
Priority:	Normal	
Assignee:	Nyall Dawson	
Category:	Labelling	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>The old "Discourage other labels from covering features in this layer" option to manage labels has been renamed to "blocking" (which I find not really comprehensive and leads to really ugly and meaningless translation - not all translators check the context before translating; I would have preferred labels like "Use as obstacles for labels", "Set features as obstacles"...) But...</p> <p>now that there's a "no label" option, is there a need to have a "blocking" one (actually, a "no label" configuration with hard-coded obstacles management)?</p> <p>What about:</p> <ul style="list-style-type: none">- keep only the "no label" option- move the blocking as an option (maybe a checkbox) of "no labels": set the obstacles-related configurations, allowing<ul style="list-style-type: none">- to reuse the obstacles widget to fine tune the blocking of labels- to get rid of all these greyed options of "show labels for this layer" (what about simply rename this into "Show labels"?) which disturb the user.
